Global invasive species information network

Organisation

The Global Invasive Species Information Network (GISIN) was formed to provide a platform for sharing invasive species information at a global level, via the Internet and other digital means. A group of collaborators lead by the **United States Geological Survey**, are developing the GISIN as a Web-based network of databases that are connected by a common set of data types. The resulting network, or GISIN, provides increased access to data and information that will in turn help detect, rapidly respond to, and control invasive species.

Summary description of the site

The Global Invasive Species Information Network (GISIN) provides a platform for sharing invasive species information at a global level, via the Internet and other digital means.
You can browse various invasive species lists by importance, country or species; look up occurrences of specific species; download files, etc or you can search the database using key words.
There is also useful training material accessible from this site – go to **http://www.gisin.org/DH.php?WC=/WS/GISIN/GISINDirectory/Tutorials.html&WebSiteID=4**.
