

Lucid matrix keys

Organisation

Identic Pty Ltd
Brisbane, Australia

Summary description of the site

The Lucidcentral support site for the Lucid matrix key software includes a key search facility <http://www.lucidcentral.org/en-us/keys173;/searchforakey.aspx> that enables users to find Lucid matrix keys and Lucid Phoenix dichotomous keys developed by various authors and institutions world-wide for various taxonomic groups, including pest organisms, as well as diagnostic keys. You can search by using tabs, such as region and type of organism, and by using a key word search.

A number of Lucid pest identification and crop diagnostic keys developed by various agencies have now been “published” as smartphone (Android and iOS) apps - including a series of weed identification keys, the diagnostic keys for citrus and palms developed for ITP-APHIS, as well as diagnostic keys for disorders in sweetpotato (world-wide) and rice (SE Asia). For further information and access these app keys go to Google Store (<https://play.google.com/store/apps/developer?id=LucidMobile>) for Android apps and <https://itunes.apple.com/au/app/key-to-insect-orders/id938574258?mt=8> for iOS apps. Other crop diagnostic keys for wheat, barley, canola and pulses (Australia) – can be accessed at the MyCrop site (<https://www.agric.wa.gov.au/mycrop>).
