Plantwise knowledgebank

Organisation

Centre for Agriculture and Biosciences International

Summary description of the site

The Plantwise Knowledge Bank, originally developed by CABI as a CD Compendium, is now an online database providing a filtering device for obtaining information on possible causes of pest problems.

You first have to select your country and the crop or host plant affected. You then click on "Show Results" to get an alphabetical list of pests recorded for that country and crop/host. You can further filter this list by selecting various features, including the plant part affected.
