

Tank Mix Calculator

Organisation

FarmLogic

Summary description of the site

TapLogic develops the powerful FarmLogic decision making tool for the farm. FarmLogic is an app that allows you to enter and store records as you work in the field using the FarmPAD rugged handheld computer or enter your work through the web component of FarmLogic.

This agriculture application is provided free for any farmer to use on their mobile device to quickly and easily generate a tank mix. Just enter your acreage, tank size, and carrier volume. Next, select your chemicals from our list or add your own. Tank Mix Calculator will then provide you with the number of loads required to spray your acreage, along with full and partial load mixes of the chemicals you selected.
